

Beyond the Levy: Future-Proofing NHS Workforce Pipelines

Tammie Harwin
Nov 2025

Attending the Council of Deans of Health Autumn Conference 2025 left me both motivated and unsettled. The collective commitment to the NHS workforce agenda was clear, yet the discussions revealed a deep uncertainty around the practical delivery of the ambitions set out in the Government's new 10-Year Health Plan. As colleagues reflected, policy and planning still feel disconnected, and without a clear, funded workforce plan, universities and NHS employers alike cannot plan the sustainable training pipelines the system depends upon.

Policy Context: The 10-Year Health Plan and Workforce Uncertainty

The new NHS 10-Year Health Plan sets out an ambitious agenda built around three defining shifts, from hospital to community, from analogue to digital, and from sickness to prevention. Consensus at the conference seemed to see these as the right priorities, but to make them real, the NHS needs a skilled, adaptable, and consistently replenished workforce. The Government's recent call for evidence on the forthcoming 10-Year Workforce Plan, based on these same three shifts, represents a vital opportunity to bring clarity and realism to workforce development and funding policy.

As **Universities UK (2025)** notes, universities already educate and train the majority of the future NHS workforce and have rapidly expanded degree-apprenticeship routes to meet national demand — but continued growth depends on clear policy signals and sustainable investment.

“Universities are ready to play their full part in training the next generation of NHS staff, but they need stability in funding and clarity over future workforce plans.” (Universities UK, 2025)

At the conference, discussion repeatedly returned to one theme: Government policy isn't joined up. One department is removing Level 7 apprenticeship funding for adults (over 21), while another is launching new plans that depend on advanced clinical and community skills. Without synchronised decision-making, the ambition of the Health Plan will continue to outpace the system's capacity to deliver it.

Funding Reforms and Uncertainty: A New Skills White Paper, Level 7 Mitigation Model and Modular Learning Approach

At UVAC, we've consistently raised concerns about the decision to restrict funding for higher-level apprenticeships. From our perspective — and that of university and NHS colleagues I spoke with at the conference — it risks undermining national workforce planning and the NHS's ability to develop and retain advanced practitioners.

These concerns aren't new. Through the *Skills for the Future: Apprenticeships and Training* inquiry (House of Commons, 2024), evidence was already presented the Committee warning that limiting funding flexibility at higher levels would damage workforce supply. Much of that evidence came from universities and employers who could see the impact coming — particularly in healthcare, where trusts already face significant financial and backfill pressures.

Those fears have since been echoed in the Select Committee's latest *Further Education and Skills* report (House of Commons, 2025), which described the response to the defunding of Level 7 apprenticeships as "overwhelmingly opposed." The Committee has now called for the reintroduction of levy funding for all ages in growth-driving sectors, including healthcare - warning that the current policy will "exacerbate workforce shortages in key professions such as nursing and advanced practice." It's a view that very much reflects UVAC's own, that these changes risk pulling apart one of the few policy levers that actually works for the NHS.

The new NHS England and Department of Health and Social Care Level 7 Mitigation Fund is a welcome gesture — but a temporary one. Running from 2026 to 2029, it supports just five professions: Advanced Clinical Practitioner, Specialist Community Public Health Nurse, District Nurse, Clinical Associate in Psychology, and Population Health Intelligence Specialist. This funding replaces what would previously have been covered by the apprenticeship levy for apprentices aged 22 and over, but it is capped, short-term, and narrowly focused.

Colleagues at the conference highlighted that while the mitigation fund sustains some core programmes, the uncertainty surrounding its long-term replacement — and the absence of detailed guidance on allocations and bidding, make forward planning almost impossible. Universities are already seeing dropping numbers in key pathways such as Advanced Clinical Practice and District Nursing, as NHS trusts struggle to fund backfill, release time and fundamentally the additional headcount for these roles.

The recent Post-16 Education and Skills White Paper supports the argument that funding reform and modular learning are essential to workforce sustainability. It calls for employer-led, flexible programmes, mirroring both the uncertainty and opportunity described here:

"Providers will need to deliver modular, flexible learning that enables lifelong access to training for adults, not just initial preparation." (White Paper, p. 17)

"Employer-led design of education and training ensures programmes are responsive to current and future labour market needs." (White Paper, p. 22)

This all goes to underline that without joined-up, long-term funding models, the NHS cannot build or maintain the skilled apprenticeship pipeline it needs.

Both the Lifelong Learning Entitlement (LLE) and 'Apprenticeship Units' (funded via the new Apprenticeship and Skills Levy from April 2026) offer potential mechanisms for modular and flexible provision. In principle, it could help universities deliver shorter, targeted learning aligned to NHS workforce needs and continuing professional development.

When reading the White Paper there's perhaps a level of assumption that the short course approach offered by the 'new levy', will apply at higher levels and serve as some kind of compensation for the loss of level 7 apprenticeships.

“Technical and higher technical routes up to Level 7 will become more flexible and accessible, with clearer progression into leadership and skilled employment.” (White Paper, p. 30)

However, with limited detail available on eligible courses/sectors, funding flows, and implementation timelines, both these options currently represent areas of uncertainty that constrains long-term university planning and investment in flexible learning infrastructure

University and Employer Challenges

Conversations at the conference reflected a growing tension between short-term fixes and long-term strategy. Some providers are chasing 'bums-on-seats' to meet near-term funding deadlines for L7s, while others are holding off new intakes entirely due to uncertainty over programme viability. As one delegate observed, this risks undermining the workforce pipeline just when demand for advanced roles is greatest.

Delegates also discussed duplication of provision and competition for placements - for example where additional universities seek to launch similar health programmes in a region where requirements are already filled by existing providers - and without sufficient employer support or local placement capacity. Regulators such as the NMC could play a stronger role by updating and strengthening validation processes to ensure new programmes reflect genuine workforce need and available placements. Involving employers and PRSBs more closely in programme validations and approvals could help ensure sustainability.

This is supported by a joint report by University Alliance and the University of Derby (2025) which identified fragmented funding, inconsistent regional planning and limited employer-HE collaboration as the biggest barriers to expanding healthcare degree apprenticeships – commenting:

“Without coordinated long-term planning between employers and higher education providers, the NHS risks losing vital training capacity.”

Patricia Marquis, RCN Executive Director for England, supports this position from a nursing perspective, noting that while apprenticeships can open routes into nursing for those unable to take on debt, the current system lacks sustainable funding and sufficient clinical placement capacity, which she says leaves NHS England unable to meet its own targets.

The UVAC Perspective: Aligning Ambition and Investment

UVAC has long argued that the UK needs a funding and regulatory framework that recognises the interconnected nature of policy, workforce and education. Degree and higher apprenticeships remain one of the most powerful tools for developing the future NHS workforce, but the system can only function if universities and employers have the confidence to invest.

A joined-up workforce plan requires a joined-up funding plan — one that enables universities to design, deliver

and sustain programmes aligned to long-term NHS priorities The Russell Group (2025) has similarly argued that universities' ability to meet NHS workforce targets depends on coherent long-term policy alignment across education and health, highlighting that short-term funding cycles deter investment in clinical education infrastructure and facilities, a message reflected by many sector colleagues:

The only certainty is NHS Workforce development funding uncertainty. We are well placed to co-produce programmes of study with employer partners that will meet the demands for the three shifts set out in the NHS Long Term Plan, but we require a commitment to sustainable funding. Paul Mackreth, Course Director, Leeds Beckett University.

Call to Action

The current consultation on the NHS 10-Year Workforce Plan provides a rare opportunity to bridge the gap between policy and practice. It is essential that universities, employers, and other stakeholders contribute evidence that reflects operational reality — particularly around sustainable funding, backfill pressures, and long-term workforce modelling. Only then can the NHS and its education partners deliver on the promise of the 10-Year Health Plan.

"If degree apprenticeships are to remain central to the NHS workforce plan, we must align funding policy with workforce need — not the other way around."

"The policy case for apprenticeships has never been stronger — but the funding model risks pulling the plug on workforce growth just when it's needed most." - Tammie Harwin, UVAC Associate

Linked in Post/website summary ideas:

1. This thought piece explores the funding uncertainty facing NHS workforce development and argues that sustainable, long-term investment is essential if the ambitions of the *NHS 10-Year Health Plan* are to be realised. Drawing on discussions from the *Council of Deans of Health Autumn Conference 2025*, it highlights how the withdrawal of levy-funded Level 7 apprenticeships, and the limited scope of the new Mitigation Fund, are constraining universities' ability to plan and deliver advanced clinical pathways. The *Post-16 Education and Skills White Paper (2025)* and the forthcoming *Lifelong Learning Entitlement* and *Apprenticeship & Skills Levy reforms* offer potential new mechanisms for modular and flexible provision — but without coherent long-term policy alignment, the NHS risks losing the skilled apprenticeship pipeline it needs most.

2. How do we make degree apprenticeships sustainable for the NHS?

The workforce plan can't deliver if employers can't afford to release staff — and if sustainable apprenticeship and training funding isn't in place. Apprenticeships are part of the solution — but only if funding models evolve with the system's needs.

The policy case for apprenticeships has never been stronger — but the funding model risks pulling the plug on workforce growth just when it's needed most."

What changes would make the biggest difference for your organisation?

3. Policy says "grow the workforce through apprenticeships."

Funding says "not yet."

At this year's *Council of Deans of Health Conference*, one message was clear: the NHS 10-Year Health Plan can't succeed without sustainable funding for advanced-level apprenticeships.

With the end of levy-funded Level 7s and uncertainty over new *Mitigation Fund*, *Lifelong Learning Entitlement* and *Skills Levy* reforms, universities can't plan and trusts can't release staff. We need a joined-up funding system that matches workforce ambition with investment.

4. Beyond the Levy: Future-Proofing NHS Workforce Pipelines

Attending the Council of Deans of Health Autumn Conference left me motivated — and a little uneasy. The message from speakers and audience was clear: the NHS 10-Year Plan depends on a workforce we can actually afford to train.

Yet the system isn't joined up.

The new Level 7 mitigation fund is a lifeline — but short-term, capped, and narrow.

Universities can't plan sustainable programmes, and NHS employers can't release staff to train, when funding models shift faster than the policy goals they're meant to support.

As UVAC has long argued, a joined-up workforce plan needs a joined-up funding plan.

Apprenticeships remain one of the most powerful tools we have for building the future NHS — but only if

universities and employers have the confidence to invest. The Education Committee's recent report on skills and apprenticeships echoes that concern — calling for funding parity to protect critical roles like nursing and advanced practice.

"The policy case for apprenticeships has never been stronger — but the funding model risks pulling the plug on workforce growth just when it's needed most."

5. (Personal posts /shorter piece ideas): Beyond the Levy: Reflections from the Council of Deans of Health Conference"

Attending the Council of Deans of Health Autumn Conference 2025 left me both motivated and unsettled. The collective commitment to the NHS workforce agenda was clear, yet the discussions revealed deep uncertainty around how universities and NHS partners can plan and fund the workforce pipelines the system needs. The conversations in Cardiff reminded me how much policy ambition depends on practical, joined-up planning.

The new NHS England and Department of Health and Social Care Level 7 Mitigation Fund is welcome — but temporary. Running from 2026 to 2029, it covers only five professions and replaces the apprenticeship levy for those aged 22 and over. As colleagues noted, it's capped, short-term and narrowly focused, and without clarity on what follows, universities can't plan confidently for the future.

The *Post-16 Education and Skills White Paper (2025)* reinforces the case for reform, calling for modular, employer-led provision and signaling the introduction of 'Apprenticeship Units' funded through the new Apprenticeship & Skills Levy from April 2026. Alongside this, the forthcoming Lifelong Learning Entitlement (LLE), these changes could help universities deliver flexible, modular, stackable courses to meet NHS upskilling needs — but the detail isn't there yet. Universities can't invest in new provision without knowing how it will be funded or recognised.

"If degree apprenticeships are to remain central to the NHS workforce plan, we must align funding policy with workforce need — not the other way around."

— Tammie Harwin

6. How do we make degree apprenticeships sustainable for the NHS? The workforce plan can't deliver if employers can't afford to release staff — and if there isn't sustainable apprenticeship and training funding in place. Apprenticeships are part of the solution, but only if funding models evolve with the system's needs.

"The policy case for apprenticeships has never been stronger — but the funding model risks pulling the plug on workforce growth just when it's needed most."

Beyond the Levy: Future-Proofing NHS Workforce Pipelines

By Tammie Harwin, UVAC Associate

At a time when the *NHS 10-Year Health Plan* calls for a larger, more agile workforce, the current funding model risks holding it back.

The withdrawal of levy-funded Level 7 apprenticeships and uncertainty over the short-term Mitigation Fund are already limiting universities' ability to plan and NHS trusts' ability to invest.

Drawing on insights from the *Council of Deans of Health Autumn Conference 2025*, this piece explores how funding reform, modular learning and employer-led design — as set out in the *Post-16 Education and Skills White Paper (2025)* — could provide a sustainable way forward. It argues that both the *Lifelong Learning Entitlement* and new *Apprenticeship & Skills Levy* offer opportunities for flexible, stackable routes into advanced clinical practice — but only if implemented coherently across government and aligned with NHS workforce priorities.

As the *House of Commons Education Select Committee (2025)* warns, reducing flexibility at higher levels risks exacerbating workforce shortages in critical professions such as nursing and advanced practice. The policy case for apprenticeships has never been stronger — but without joined-up funding, the NHS workforce plan will remain an ambition rather than a reality.
